

BALAKRISHNAN SAKTHIVEL

Senior Java Full Stack Developer

Irving, TX | 972-314-0616 | balakrishnansakthivel18@gmail.com | linkedin.com/in/balakrishnan-sakthivel-54a949156

PROFESSIONAL SUMMARY

Senior Java Full Stack Developer with 9+ years of experience designing and deploying scalable microservices, microfrontend architectures, and enterprise-grade web applications. Expert in Java (8/17/21), Spring Boot, React 18, and TypeScript with a proven track record of improving system performance by up to 30% and reducing infrastructure costs. Experienced leading development teams, integrating secure authentication and distributed databases, and delivering cross-platform, high-availability applications for large-scale enterprise and financial platforms. Proficient in AWS and GCP cloud environments. Available for C2C engagements; authorized to work in the US.

TECHNICAL SKILLS

Languages	Java 8/17/21, Python, SQL, TypeScript, JavaScript
Frameworks	Spring Boot, Spring MVC, Spring Security, Hibernate, JPA, React 18, Redux, Angular
Cloud & DevOps	AWS (EC2, S3, Lambda, SQS, API Gateway, CloudWatch), GCP (BigQuery, Looker), Kerberos Authentication, Docker, Kubernetes, Jenkins
Data & Messaging	Kafka, RabbitMQ, PostgreSQL, MongoDB, SQL Server, CockroachDB, Elasticsearch, Redis, Airflow
Architecture	Microservices, Microfrontend Architecture, RESTful APIs, Serverless, SOA, Reactive Programming (Mono/Flux)
Testing & Tools	JUnit, Mockito, Swagger/OpenAPI, SonarQube, JIRA, Git/GitHub, Maven, Gradle
AI Dev Tools	GitHub Copilot, Cursor AI, Gemini AI

PROFESSIONAL EXPERIENCE

JPMorgan Chase & Co. | **Senior Java Full Stack Developer** | Jun 2026 – Present

- Developing and supporting the Integrated Case Management (ICM) platform, serving compliance subscriber modules including AML (Anti-Money Laundering), FCOI (Fraud/Conflict of Interest), and SURV (Surveillance), improving case-processing performance and system reliability.
- Contributing to the Violation Framework (VF) application, used to track, route, and manage compliance violations across enterprise banking operations.
- Building and developing a microfrontend architecture using React 18, enabling independently deployable, scalable UI modules across multiple case-management subscribers.
- Developing backend microservices using Java 21, improving modularity and overall system performance for high-volume enterprise case-management workflows.
- Deploying microservices on AWS with Kerberos-based authentication, strengthening secure access control across enterprise systems.
- Integrating CockroachDB for distributed, highly available data storage and Elasticsearch for fast, scalable case search and indexing.

Tech Stack: Java 21, React 18, Microfrontend Architecture, Microservices, AWS, Kerberos Authentication, CockroachDB, Elasticsearch

Verizon | **Senior Java Full Stack Developer** | Aug 2022 – Jan 2026

- Led design and development of 15+ high-performance REST APIs using Spring Boot, achieving 25–30% improvement in system response times and scalability across enterprise workflows.
- Built reusable, scalable React 18 components with TypeScript and Redux for state management, collaborating closely with designers and product managers to deliver high-quality, maintainable UI features.
- Designed a secure Data-as-a-Service (DaaS) gateway with rate-limit-based authentication, improving performance and scalability of enterprise data access across internal services.
- Implemented dynamic approval workflow engine driven by JSON config stored in DB, enabling business teams to change workflow logic without code changes.
- Developed Python/Airflow DAG pipeline to migrate data from PostgreSQL to GCP BigQuery on a scheduled basis, powering Looker BI reports for bi-monthly executive reviews.

- Integrated GCP BigQuery and PostgreSQL backends with complex query optimization for high-volume data retrieval.
- Applied global exception handling, API versioning, and Swagger/OpenAPI documentation, while driving automated testing and CI/CD practices for production-grade robustness.
- Achieved 80%+ unit test coverage using JUnit, Mockito, and SonarQube; followed TDD practices across all sprint deliverables.
- Collaborated in Agile Scrum teams — daily standups, sprint planning, retrospectives — using JIRA and GitHub to drive cross-platform feature delivery and code reviews.

Tech Stack: Java 17, Spring Boot, React 18, TypeScript, Redux, PostgreSQL, GCP BigQuery, Airflow, Kafka, Docker, Kubernetes, Jenkins, Redis, JUnit, Mockito, Swagger

Cognizant / First Abu Dhabi Bank (FAB) | Java Backend Developer | Feb 2021 – Aug 2022

- Developed reactive microservices using Java async programming (Mono/Flux), improving system performance and scalability by 15%.
- Led a team of 5 developers to design and deliver critical customer onboarding microservices for a cross-platform mobile banking application under tight Agile deadlines.
- Reduced total infrastructure and operations costs by 20% by driving migration to Docker-based CI/CD pipelines and automated deployment practices.
- Built serverless components using AWS Lambda and API Gateway, integrating with RESTful backend APIs, and migrated FTP submission flows to a secure AWS SFTP/S3/SQS pipeline.
- Designed AWS S3 upload workflow using the JavaScript AWS SDK, enabling parallel asset processing and reducing upload time by 8%.
- Improved application security by leveraging AWS S3 for secure storage of environment variables and application config properties.
- Containerized services on Kubernetes clusters deployed on AWS; established code standards and review practices across teams.

Tech Stack: Java 21, Spring Boot, AWS (EC2, Lambda, S3, SQS, API Gateway, CloudWatch), Docker, Kubernetes, PostgreSQL, Redis, CI/CD, Mono/Flux, JIRA

Relavantz Technology / Ciox Healthcare | Java Developer | Jul 2017 – Feb 2021

- Modernized legacy monolithic architecture by migrating applications to AWS cloud infrastructure using Spring Boot microservices.
- Developed core RESTful APIs with Spring Boot, Spring Security, and Hibernate to support high-traffic enterprise healthcare workflows.
- Implemented Java 8 features (Lambda, Parallel Streams, Functional Interfaces) and concurrency patterns to optimize backend performance.
- Built frontend reporting charts and tables using Angular, ensuring seamless integration with Spring Boot backend APIs.
- Contributed to SOA design patterns (Singleton, MVC, Business Delegate) across enterprise-level application modules.

Tech Stack: Java 8, Spring Boot, Spring MVC, Spring Security, Hibernate, Angular, RESTful, Kafka, MongoDB, Oracle, Maven, Kubernetes, Jenkins, GitHub

EDUCATION

Bachelor of Engineering in Computer Science | Anna University, India

WORK AUTHORIZATION

Available for Corp-to-Corp (C2C) engagements. Currently based in Irving, TX. Open to remote and hybrid roles nationwide.
